PREFACE

This summary contains additional information on the "new" and "change" intelligence targets listed in the Mission Index (MI) report for this mission. A "new" target is either a newly identified installation or a known installation which is being reported for the first time by NPIC. A "change" target is an installation where a basic change is observed in facilities. Also included under "change" targets are those installations where analysis of current photography furnishes more precise information. Items in this report are arranged in three sections --

Section I provides a description of new targets.

Section II provides a description of previously reported targets showing change.

Section III provides a listing of those targets where detailed analysis has negated the new or change status reported in the MI report for this mission.

Targets are arranged 1) by country, 2) within the country according to subject, 3) within the subject by WAC area, and 4) within the WAC area by geographic coordinates in ascending order. The map base used (when available) for the derivation of coordinates is the latest edition of the US Air Target Chart, Series 200.

The header line for each target contains, reading

from left to right, the target name, the geographic coordinates, the World Aeronautical Chart number, the Bombing Encyclopedia (BE) number, and the NPIC target number.

The photo reference data line provides the pass number (e.g. 10D), frame/index numbers (e.g. F/4 & A/6 or 4/5, best frame grid (Universal Grid No 1, February 1964) coordinates (e.g. 36-12), limiting conditions (e.g. H), photographic quality (e.g. F), photographic coverage (e.g. T), and the mode (e.g. ST).

The symbols for limiting conditions affecting photography are: C (clear); SC (scattered clouds); H (haze); CS (cloud shadow); SD (semidarkness); S (snow); and O (obliquity).

The quality of the photography is categorized as G (good), F (fair), or P (poor).

The extent of photographic coverage is denoted by the symbols T (total), PT (partial), or ID (identification only).

The mode of coverage is indicated by ST (stereo), MN (mono), or PST (partial stereo).

For the convenience of the user, an index to all targets is included following Section III. Targets in the index are arranged alphabetically within a country.
